HIGH AVAILABILITY

when communication is **critical**

FEATURES

- High availability and fault tolerant solution maximizing uptime during
 - System level failures
 - Environment-level failures (power outage, fire, earthquake, etc.)
 - Planned outage for system(s) maintenance and upgrades
- Automates disaster recovery
- Easy to setup and install
- Made for Critical Communication over IP (CCoIP®)

DESCRIPTION

Protect your system with STENTOFON redundant server solution. The concept provides a 1:1 redundancy of AlphaCom XE servers allowing you to install the servers in separate racks or server rooms.

Having the AlphaCom servers in different racks or server rooms provides options for:

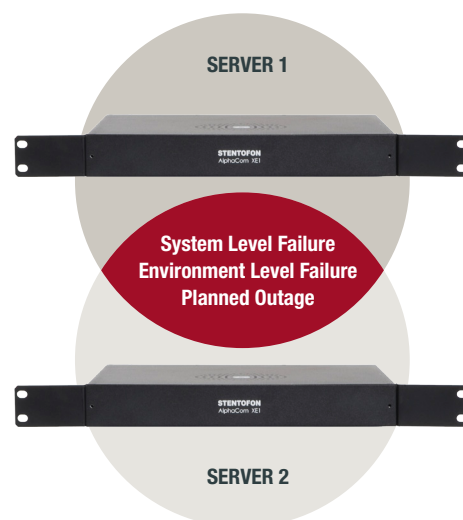

- Have servers in different fire zones
- Have redundant power sources
- Do maintenance in server room (patch panels, power, etc) without system downtime

In the 1:1 setup the servers are setup as a high availability pair sharing the same configuration. One of the servers is operational, while the other is in standby mode.

The solution automates disaster recovery. Change-over is fast. The total change over time depends on system-size. Normally it will take less than a minute for a full system with 552 IP-stations.

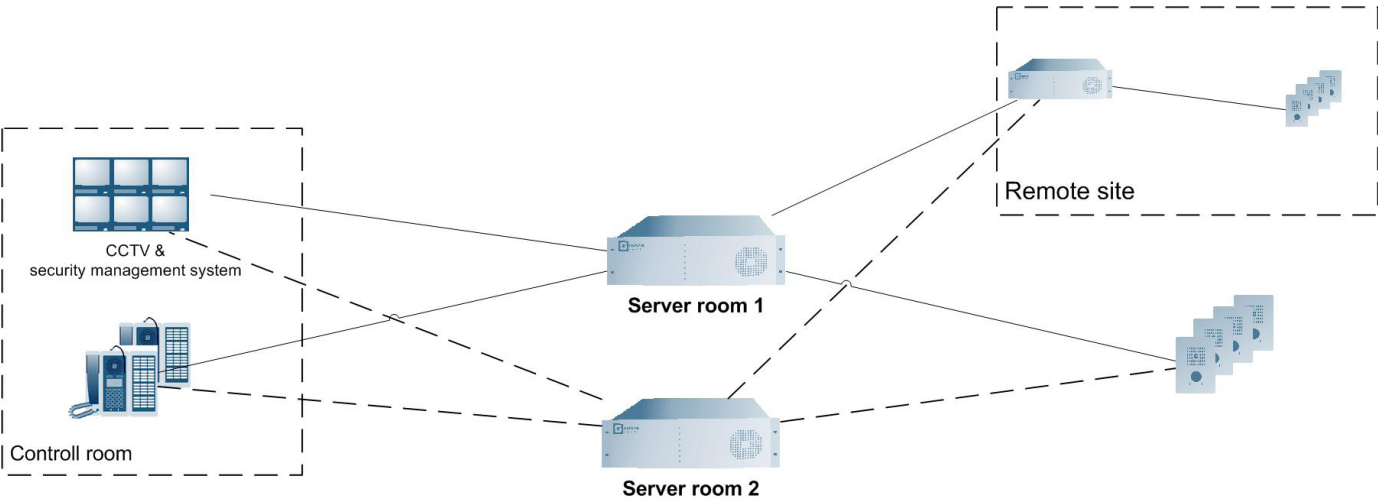

SOFTWARE REQUIREMENTS

The AMC-IP card must be running software version 11.2.3.2 or higher. This software is compatible with all AMC-IP hardware versions.

DEFINITION STENTOFON CCOIP

Critical Communicaton is about Critical Situations with

- and life property at stake
- Human resources
- Financial structures
- not high
- acEss

Critical Communication over IP (CCoIP) employs VoIP, but goes an important step further by adding new IP services and applications integrating security, quality and reliability capabilities required in critical situations.
